

ORAVEXX™

Introducing Orcosa's non-addictive alternative to opioids for the management of pain and inflammation.

Why is ORAVEXX™ groundbreaking?

ORAVEXX™ is a cGMP manufactured product that provides for accurate and reliable dosing of CBD, enabling researchers to evaluate CBD in well-controlled clinical trials.

Is Orcosa supporting clinical trials of ORAVEXX™?

Orcosa is proud to support investigator-initiated clinical trials conducted under FDA-authorized Investigational New Drug (IND) applications to independently evaluate CBD as a pain therapy.

Is ORAVEXX™ safe and effective?

Based on results from a Phase 1/2 clinical trial conducted by NYU Langone, ORAVEXX™ effectively improved post-operative pain and patient satisfaction with no safety concerns.

How does CBD benefit from the RITe™ Platform?

The RITe™ Platform enhances the bioavailability of CBD, enabling lower doses to achieve therapeutic effects, and reducing safety concerns commonly seen with CBD use.

Why hasn't CBD previously been prescribed to treat pain?

Research on CBD historically suffered from inaccurate dosing, poor bioavailability, difficult administration and non-GMP manufactured products.

ORAVEXX addresses these issues – enabling researchers the opportunity to confidently study CBD in clinical settings.
